Spaces for media interaction  20

Spaces for meeting and worship  21
  Conference center  21
  House of worship  21

Spaces for teaching  22
  Single-purpose spaces  22
  Instructional spaces  22
  Stage technology  22
At the very core of human nature is an instinct to gather together with one another and share our experiences and perspectives—to tell and hear stories. And ever since the first humans huddled around a fire to share these stories, there has been theatre. As people evolved, so did the stories they told and the settings where they told them. Modern theatre may have sophisticated audiences, highly trained actors, and state-of-the-art theatre equipment, but the essence of the storytelling experience—the shared energy between audience and performer—is unchanged from our earliest history. The biggest difference is the building where theatre happens.

Theatre buildings evolved from the open-air amphitheatres of the Greeks and Romans to the incredible array of forms we see today. Though some forms work better for particular types of performance, there is no ideal shape for a theatre. A theatre may house drama, classical or popular music, opera, musicals, ballet, modern dance, spoken word, circus, or any activity where an artist communicates with an audience. How could any one kind of building work for all these different types of performance?

There is no ideal theatre size. The scale of a theatre depends on the size of the staging required, the type of performance, and the size of the audience, with each variable influencing the others as they change. With that kind of nuance, no one-size-fits-all formula works.

A theatre is not simply a space for watching a performance. A successful theatre supports the emotional exchange between the performer and the audience, and the exchange audience members create between one another.

All that said, we’ve outlined the typical theatre forms for different performance types.
Spaces for drama

Drama—comedy or tragedy—can be performed in many different types of theatres, as well as outdoors, and in warehouses, stairwells, and other unusual places. Many of these spaces and forms also support musical theatre, which is discussed separately under “Spaces for entertainment.”

For simplicity, we’ve divided this discussion into smaller drama theatres—which include flexible and courtyard theatres—and larger drama theatres, which include thrust, open, and proscenium stages. But keep in mind, no discussion like this can fully describe the many types of spaces where theatre happens.

Small drama theatres

A small drama theatre usually seats between 50 and 300, with an upper limit of perhaps 400. It often doesn’t have a separate stagehouse—meaning the stage is within the same architectural space as the audience. These small theatres often feature a unique or especially intimate actor/audience relationship. This may be defined by a fixed seating arrangement, or the relationship may be created by temporary seating set up in a found space or in a flexible, purpose-built space. We’ve described popular forms below.

• Bingham Theatre, Actors Theatre of Louisville, Louisville, KY, USA
• The Space Theatre, Helen Bonfils Theatre Complex, Denver Center for the Performing Arts, Denver, CO, USA
• Orange Tree Theatre, Richmond, Surrey, UK
• Royal Exchange Theatre, Manchester, UK (image shown)
• St. James Cavalier Center of Creativity, Valletta, Malta

**indicates venues that weren’t designed by Theatre Projects

**Endstage**

A theatre in which the audience seating and stage occupy the same architectural space, with the stage at one end and the audience seated in front facing the stage.

- Hess Theater, Whitney Museum of American Art, New York, NY, USA
- Kirk Douglas Theatre, Center Theatre Group, Culver City, CA, USA
- New School, New York, NY, USA
- Playwrights Horizons, New York, NY, USA**
- Pullman Stage, Pegasus Theatre, Oxford, UK (image shown)
- Studio Space, Beacon Arts Centre, Greenock, UK

**Thrust**

A theatre in which the stage is extended so that the audience surrounds it on three sides. The thrust stage may be backed by an enclosed proscenium stage, providing a place for background scenery, but audience views into the proscenium opening are usually limited. Actor entrances are usually provided to the front of the thrust through vomitories or gaps in the seating.

- Byrne Theater, Northern Stage, Barrette Center for the Arts, White River Junction, VT, USA
- Everyman Theatre, Baltimore, MD, USA
- Jentes Family Courtyard Theater, Chicago Shakespeare Theater, Chicago, IL, USA
- Ruth Caplin Theatre, University of Virginia, Charlottesville, VA, USA
- Teaching Theatre, University of Southern Indiana, Evansville, IN, USA (image shown)
- The Playhouse, Overture Center for the Arts, Madison, WI, USA
Flexible theatres

Flexible theatre is a generic term for a theatre in which the playing space and audience seating can be configured as desired for each production. Often, the theatre can be configured into the arena, thrust, and endstage forms described above. Environmental, promenade, black box, and studio theatre are other terms for this type of space, suggesting particular features or qualities.

Environmental theatre

A found space in which the architecture of the space is intrinsic to the performance, or a theatre space that is transformed into a complete environment for the performance. The audience space and performance space are sometimes intermingled, and the action may be single-focus or multiple-focus. In environmental theatre, the physical space is an essential part of the performance.

• The Mysteries productions at the Cottesloe Theatre, Royal National Theatre, London, UK (image shown)

Promenade theatre

A theatre without fixed seating in the main part of the auditorium—this allows the standing audience to intermingle with the performance and to follow the focal point of the action to different parts of the room. Multiple-focus action and a moving audience are the primary characteristics of the promenade theatre.

• De La Guarda and Fuerza Bruta productions at the Daryl Roth Theatre, New York, NY, USA**
**Black box theatre**

A flexible theatre usually without character or embellishment—a “void” space that may indeed be black, but isn’t always. Usually, audience seating is on the main floor, with no audience galleries, though a technical gallery may be provided.

- Black Box Theatre, Fine Arts Instructional Center, Eastern Connecticut State University, Willimantic, CT, USA (image shown)
- Black Box Theatre, Performing Arts & Humanities Building, University of Maryland, Baltimore County, Baltimore, MD, USA
- Kogod Theatre, Clarice Smith Performing Arts Center, University of Maryland, College Park, MD, USA
- Regis Philbin Studio Theatre, Marie P. DeBartolo Center for the Performing Arts, University of Notre Dame, South Bend, IN, USA
- Studio Theatre, Milton Court, Guildhall School of Music & Drama, London, UK

**Studio theatre**

A flexible theatre with one or more audience galleries on three or four sides of a rectangular room. The main floor can usually be reconfigured into arena, thrust, endstage, and flat floor configurations. The room usually has some architectural character.

- BRIC House Ballroom, BRIC Arts Media House, Brooklyn, NY, USA
- Centerstage, ’62 Center for Theatre and Dance, Williams College, Williamstown, MA, USA
- Clore Theatre, Unicorn Children’s Centre, London, UK
- Stratford Circus, London, UK
- Studio Theatre, Conjunto de Artes Escénicas, Universidad de Guadalajara, Guadalajara, Jalisco, Mexico
- Studio Theatre, Rubenstein Arts Center, Duke University, Durham, NC, USA
- Studio, Tempe Center for the Arts, Tempe, AZ, USA (image shown)
- Studio Theatre, Woodman Family Community and Performance Center, Moses Brown School, Providence, RI, USA
The term *courtyard theatre* embraces a range of theatre forms, all with the common characteristic of at least one raised seating gallery surrounding a central area. Often this central area is flexible, and can be configured into arena, thrust, endstage, and flat floor configurations. Sometimes the central area has fixed seating that faces a proscenium opening and stage.

Inspired by the Shakespearean theatres of Elizabethan times and English Georgian theatres, the much loved Cottesloe Theatre at the National Theatre in London is the granddaddy of contemporary courtyard theatres. Interestingly, a courtyard theatre does not need to be rectangular. Hall Two at The Sage is a striking example of a 16-sided courtyard theatre.

- Alexis & Jim Pugh Theater, Dr. Phillips Center for the Performing Arts, Orlando, FL, USA
- Arthur Miller Theatre, Charles R. Walgreen Jr. Drama Center, University of Michigan, Ann Arbor, MI, USA
- Cottesloe Theatre, Royal National Theatre, London, UK
- Courtyard Theatre, Plano, TX, USA
- Hall Two, Sage Gateshead, Gateshead, UK
- Jarson-Kaplan Theatre, Aronoff Center for the Arts, Cincinnati, OH, USA
- Jerwood Vanbrugh Theatre, Royal Academy of Dramatic Art, London, UK
- Martha Cohen Theatre, Arts Commons, Calgary, Alberta, Canada
- Samuel H. Scripps Mainstage, Polonsky Shakespeare Center, Theatre for a New Audience, New York, NY, USA (image shown)
- Tricycle Theatre, London, UK
- Wilde Theatre, South Hill Park Arts Centre, Bracknell, UK
- Woolly Mammoth Theatre, Washington, DC, USA
Large drama theatres

Large drama theatres seat audiences in the range of 300 to 900 with an upper limit of about 1,100. Larger drama theatres are usually some variant of the proscenium form, but some feature a thrust or open stage.

Proscenium theatre

In a proscenium theatre, the stage is located at one end of the auditorium and is physically separated from the audience space by a proscenium wall. This is sometimes called a “two-box” arrangement—the auditorium and stage occupy two separate “boxes” or rooms. The stage box (stagehouse) provides fly space and wings and permits a wide variety of scenic and lighting effects. The auditorium box is the audience chamber, which may take many forms—fan-shaped, courtyard, lyric, etc.

The opening between the auditorium and stage is called the proscenium frame, proscenium opening, proscenium arch, or simply the proscenium. In its earliest forms, the heart of the proscenium theatre was the forestage in front of the proscenium. It wasn’t until the middle part of the nineteenth century that performers were confined with the scenery behind the proscenium arch. Contemporary proscenium theatres try to provide a flexible transition zone between stage and audience, adaptable to suit the needs of each performance.

- Albert Ivar Theatre, Goodman Theatre, Chicago, IL, USA
- American Airlines Theatre, Roundabout Theatre Company, New York, NY, USA
- Argyros Stage, South Coast Repertory, Costa Mesa, CA, USA
- Baerum Kulturhus, Sandvika, Norway
- Centerpoint Theatre, Dubai Community Theatre & Arts Centre, Dubai, UAE
- Downstairs Theatre, Steppenwolf Theatre, Chicago, IL, USA
- Douglas L. Manship, Sr. Theater for the Visual and Performing Arts, Shaw Center for the Arts, Baton Rouge, LA, USA
- Kay Theatre, Clarice Smith Performing Arts Center, College Park, MD, USA (image shown)
- Mainstage, ’62 Center for Theatre and Dance, Williams College, Williamstown, MA, USA
- Mainstage Theatre, Forbes Center for the Performing Arts, James Madison University, Harrisonburg, VA, USA
- Mark and Stephanie Medoff Auditorium, New Mexico State University Center for the Arts, Las Cruces, NM, USA
- Max Bell Theatre, Arts Commons, Calgary, Alberta, Canada
- Multipurpose Theatre, Performing Arts & Humanities Building, University of Maryland, Baltimore County, Baltimore, MD, USA
- Paul R. Cramer Center for the Arts, Steward School, Richmond, VA, USA
- Royal Court Theatre, London, UK
- Sobrato Auditorium, Hammer Theatre Center, San Jose Repertory Theatre, San Jose, CA, USA
- Théâtre 900, Le Quai, Angers, France
- Thomas B. and Kathleen M. Donnell Theatre, Wolfe Center for the Arts, Bowling Green University, Bowling Green, OH, USA
Tyrone Guthrie’s thrust spaces in Stratford, Ontario, and Minneapolis, Minnesota are notable examples of the thrust stage. The Olivier Theatre in the National Theatre in London is a modified thrust, with the audience arrayed in a 110° arc around the front of the stage.

- Angus Bowmer Theatre, Oregon Shakespeare Festival, Ashland, OR, USA**
- Birmingham Repertory Theatre, Birmingham, UK
- Festival Theatre, Stratford Shakespeare Festival, Stratford, Ontario, Canada**
- Olivier Theatre, Royal National Theatre, London, UK (image shown)
- Original 1963 thrust stage and new Wurtele Thrust Stage, Guthrie Theater, Minneapolis, MN, USA**
Spaces for acoustic music (unamplified)

Concert and recital halls are theatres for the performance of music. The requirements of acoustic (non-amplified) music determine the volume, shape, and even the architectural detailing of the hall. At the same time, the hall must support the visual presentation of the performance and provide an intimate patron experience. A universal characteristic of these buildings is that performers and audience share the same space—there is no architectural separation between stage and auditorium. Today, concert halls aren’t used exclusively for acoustic music. A new hall must have enough flexibility to allow other uses, like popular (amplified) and ethnic music, dance, lectures, meetings, and film presentations.

A space designed for soloists and small ensembles (up to chamber orchestra size), with a seat count typically in the range of 150 to 800. This form is a descendant of the court music rooms of the Renaissance. It is often rectangular in plan, with an open concert platform at one end of the room and seating galleries on the other three walls.

- Blue Hall, The Arts Center at NYU Abu Dhabi, Abu Dhabi, UAE
- Chamber Hall, Shanghai Symphony Hall, Shanghai, China
- Fenway Center, Northeastern University, Boston, MA, USA
- Gildenhorn Recital Hall, Clance Smith Performing Arts Center, College Park, MD, USA
- Legacy Hall, RiverCenter for the Performing Arts, Columbus, GA, USA
- Mixon Hall, Cleveland Institute of Music, Cleveland, OH, USA (image shown)
- Musée Yves Saint Laurent – Marrakech, Marrakech, Morocco
- Performance Hall, Douglas and Beatrice Covington Center for Visual and Performing Arts, Radford University, Radford, VA, USA
- Recital Hall, Amerding Center for Music and the Arts, Wheaton College, Wheaton, IL, USA
- Recital Hall, Esplanade - Theatres on the Bay, Singapore
- Recital Hall, University Hall, University of Massachusetts Boston, Boston, MA, USA
- Reyes Organ and Choral Hall, DeBartolo Performing Arts Center, University of Notre Dame, South Bend, IN, USA
- Robert and Gertrude L. Shuck Music Recital Hall, Southeast Missouri State University - River Campus, Cape Girardeau, MO, USA
- Robert J. Werner Recital Hall, Mary Emery Hall, College-Conservatory of Music, University of Cincinnati, Cincinnati, OH, USA
- Studzinski Recital Hall, Bowdoin College, Brunswick, ME, USA
- Weber Music Hall, University of Minnesota, Duluth, MN, USA
Concert halls

A space designed primarily for symphonic music, with a seat count typically in the range of 1,100 to 2,000. The upper limit for a successfully intimate room is about 2,200 seats.

Shoebox concert hall

The classic concert hall form is the shoebox, named after the rectangular shape and approximate proportions of a tennis-shoe box. The shoebox form has high volume, limited width, and multiple audience levels, usually with relatively narrow side seating ledges. The Musikvereinsaal in Vienna, the Concertgebouw in Amsterdam, and Symphony Hall in Boston are classic examples of this form.

- Chan Shun Concert Hall, Chan Centre for the Performing Arts, Vancouver, British Columbia, Canada
- Concert Hall, Esplanade – Theatres on the Bay, Singapore (image shown)
- Concert Hall, Fine Arts Instructional Center, Eastern Connecticut State University, Willimantic, CT, USA
- Concert Hall, Forbes Center for the Performing Arts, James Madison University, Harrisonburg, VA, USA

Some modern concert halls have audience seating in terraces reminiscent of a vineyard. The seating may completely or partially encircle the concert platform. An important early example of the vineyard form is the Berlin Philharmonie. A hall with partial encirclement may be called a modified vineyard. The Walt Disney Concert Hall in Los Angeles is a contemporary example of this form.

- Helzberg Hall, Kauffman Center for the Performing Arts, Kansas City, MO, USA
- New World Center, Miami Beach, FL, USA
- Philharmonie, Berlin, Germany**
- Shanghai Symphony Hall, Shanghai, China
- Walt Disney Concert Hall, Los Angeles Music Center, Los Angeles, CA, USA (image shown)
Spaces for opera and dance

The opera house developed as a specific theatre form in the late Renaissance and persists to this day. Historically, opera and ballet performances coexist in these spaces, but beginning in the twentieth century, dedicated dance spaces began to appear.

An opera house is a proscenium theatre in form. Seat count ranges from 1,200 to 2,000 with an upper limit of about 2,400 seats. The auditorium is almost always multilevel with side tiers or boxes to enhance visual and aural intimacy.

The stage is usually large, with extensive machinery. It sometimes has separate auxiliary stages in a cruciform, six-square, or other arrangement to enable the opera company to perform in repertory. European opera houses generally have smaller auditoriums and more elaborate stages, as compared to opera houses in the United States.

- Glyndebourne, Lewes, Sussex, UK (image shown)
- Margaret McDermott Performance Hall, Winspear Opera House, AT&T Performing Arts Center, Dallas, TX, USA
- Musiktheater am Volksgarten, Linz, Austria
- Ningbo Opera House, Ningbo, China
- Oslo Opera House, Oslo, Norway
- GNO Stavros Niarchos Hall, Stavros Niarchos Foundation Cultural Center, Athens, Greece
Dance theatre

Other than the tradition of ballet performance in opera houses, there is no strongly identifiable theatre form for dance performance. Smaller 100 to 300-seat spaces designed for dance are usually endstage or proscenium. The design of the auditorium emphasizes frontal sightlines and a clear view of the stage floor. Sometimes the seating is on telescopic risers that can be retracted to allow the whole space to be used for rehearsal or instruction.

A few spaces seating 300 to 1,200 have been designed specifically for dance. Examples include the Lucent Danstheater in The Hague and the Joyce Theatre in New York City.

- Lucent Danstheater, The Hague, Netherlands**
- Joyce Theatre, New York, NY, USA **

For larger seat counts, the opera house form generally prevails. For example, the New York State Theatre at Lincoln Center was initially designed specifically for dance and ballet.

- New York State Theatre, Lincoln Center, New York, NY, USA **
Almost every theatre will be put to many uses, but here we discuss two particular types of multiuse theatres—the multipurpose theatre and the multiform theatre.

The contemporary multipurpose theatre is commonly found in medium to large US cities and occasionally elsewhere around the world. These proscenium theatres are designed to accommodate a range of activity—symphonic music, opera, musical theatre, ballet, and touring productions. Seat count is in the range of 1,200 to 2,400 with an upper limit of about 2,800 seats.

The auditorium form is heavily influenced by the acoustic requirements for symphony, while the stagehouse is designed to meet the needs of opera and musicals. These rooms are designed with the ability to change configurations (especially in the forestage area) and to adjust the room acoustics to the needs of each performance type.
A multiform theatre can be reconfigured to change the actor-audience relationship and the seat count. By moving large architectural elements, the one-room form of the concert hall can be transformed into a two-room theatre—an auditorium and a stage with a proscenium. Side wall seating towers can be positioned to narrow the room or otherwise change its proportion.

Often the orchestra floor (stalls) can be leveled and the seats removed to create a large, flexible, flat floor area. (Many of the theatre forms described here can be designed with this flat floor capability. It was a common feature of eighteenth and nineteenth century opera houses.)

The primary contemporary examples of the multiform theatre are Derngate Auditorium in Northampton, England and Cerritos Center for the Performing Arts in Cerritos, California. The Cerritos theatre can be reconfigured from a 970-seat drama theatre to a 1,400-seat multipurpose theatre, an 1,800-seat concert hall, an 1,800-seat arena, and a 6,400 square foot flat floor space for banquets and exhibits.

- Cerritos Center for the Performing Arts, Cerritos, CA, USA
- Derngate, Northampton, UK (image shown)
- Potter Rose Performance Hall, Wyly Theatre, AT&T Performing Arts Center, Dallas, TX, USA
- Steinmetz Hall, Dr. Phillips Center for the Performing Arts, Orlando, FL, USA
- Royal Opera House Muscat, Muscat, Oman
- Dubai Opera, Dubai UAE
Spaces for entertainment

Venues for popular entertainment can take many forms. Here we discuss two important types—the multi-use commercial theatre and the showroom.

Multi-use commercial theatre—a “Broadway theatre” form

This is a proscenium theatre designed primarily for amplified sound. The room acoustics are usually “dry” with little adjustment available, making these rooms unsuitable for un-amplified acoustic music. The seat count typically ranges between 1,200 to 2,500, with an upper limit of 10,000 seats.

A reasonable degree of intimacy can be achieved with multiple cantilevered balconies, bringing a large portion of the audience as close to the stage as possible. The stage is usually sized and equipped to receive large-scale touring musicals. Other uses are headliners, pop music performances, and award ceremonies.

- Auditorio Telmex, Guadalajara, Mexico
- Dolby Theatre (formerly Kodak Theatre), Hollywood, CA, USA (image shown)
- John A. Williams Theatre, Cobb Energy Performing Arts Centre, Atlanta, GA, USA
- Proctor & Gamble Hall, Aronoff Center for the Arts, Cincinnati, OH, USA
- Walt Disney Theater, Dr. Phillips Center for the Performing Arts, Orlando, FL, USA
Showroom

The term showroom usually implies an entertainment venue connected with a casino, hotel, or resort. A showroom may be designed to accommodate variety or headliner acts, or it may be purpose-built for a specific production—such as a circus show—that will reside in the space for years or even decades.

A smaller room may seat only 600, but seat count is more often in the range of 1,200 to 4,000 seats. The theatre may take the form of a proscenium, thrust, or arena stage. Showrooms may introduce elaborate stage machinery, including “water stages” and other specialty mechanics.

- City of Dreams, The House of Dancing Water Theater, Macau (image shown)
- Pacific Room at Long Beach Arena, Long Beach, CA, USA
- The Han Show Theater, Wuhan, Hubei, China
- Wynn Resorts, Macau
Spaces for media interaction

Of course all theatres are spaces for interaction, but since the late twentieth century, a new type of space has developed. Artists and scientists are using these media-heavy spaces for performance, research, and instruction.

These spaces are highly flexible, usually with no fixed seating, and almost always with a high degree of acoustic adjustability. Other features may include extensive media recording and playback capability, immersive environments, and electronic communication with remote spaces for distance learning, distributed ensembles, remote performance, and other opportunities.

Among the earliest spaces of this type are IRCAM Espace de Projection at Centre Pompidou (1977) and the Philippe Villers Experimental Media Facility (the “Cube”) at MIT’s Media Lab (1985).

- Espace de Projection, IRCAM, Centre Pompidou, Paris, France**
- George and Ellen Rieveschl Digitorium, Griffin Hall, Northern Kentucky University, Highland, Heights, KY, USA
- Mixon Hall, Cleveland Institute of Music, Cleveland, OH, USA
- New World Center, Miami Beach, FL, USA (image shown)
- Philippe Villers Experimental Media Facility (the “Cube”), Massachusetts Institute of Technology, Cambridge, MA, USA**
- Sonic Lab, SARC, Queen’s University, Belfast, UK
- The Cube, Moss Arts Center, Virginia Tech, Blacksburg, VA, USA
Spaces for meeting and worship

Conference center

This is an auditorium, usually connected with a convention center or meeting facility, for plenary sessions, lectures, symposia, product launches, and simple presentations. The auditorium is often fan-shaped, facing an open platform with limited rigging facilities. The auditorium may be divisible into smaller spaces to accommodate simultaneous meetings with fewer participants.

House of worship

Recently, theatre forms and technologies have been used more and more in the design of houses of worship. Typically the room is designed for spoken word, music, drama, and multimedia presentations. The seating areas are quite varied in form, with seat counts ranging from 500 to 5,000 or more. The worship area may range from a simple platform to a full stagehouse with extensive theatre equipment.
Spaces for teaching

Almost any of the theatre forms described here might be part of an academic building—excepting maybe the casino showroom. Additional considerations arise in the design of performance spaces for students, some of which we discuss below.

Single-purpose spaces

Performing arts venues on a campus are more likely to be single purpose, since it is more likely that the academic program tied to the space occupies it at least for the full school year. (A college theatre department, for example, will likely keep their small drama space continuously in rehearsal or performance.)

Instructional spaces

Performing arts venues on campus must be designed as instructional spaces. Auditoriums should be compact and intimate, scaled to, and supportive of, the student performer. Control rooms and other support spaces must have appropriate equipment and sufficient room to serve as class labs.

Stage technology

The theatre and stage are also class labs. The theatre equipment must be suitable for the productions, but also appropriate for teaching. Consideration should be given to who operates and maintains the equipment. Economical, simple, and safe equipment is usually best.
